PRODUCT VARIATIONS

This policy applies to all HealthPartners Plans (HPP) product lines unless noted below.

POLICY STATEMENT

Outpatient hospital observation care is covered when the following Medicare coverage criteria are met:

- Outpatient hospital observation care must be reasonable and necessary.
- Decisions on the setting for delivery of health care services should be based on nationally recognized guidelines and evidence-based medical literature.

All of the following requirements must be met in order for a hospital to receive payment for observation care:

- There must be a physician order to place the patient in observation.
- The order for observation status must be medically necessary.
- Observation time must be documented in the medical record.
- Hospital billing for observation care begins at the time documented in the patient’s medical record, which coincides with the time observation care is ordered by a physician. A patient’s time receiving observation care (and hospital billing) ends when all clinical or medical interventions have been completed, including follow-up care provided by hospital staff and physicians that may take place after a physician has ordered the patient to be released or admitted as an inpatient.
- Observation care must span a minimum of eight hours and must be documented in the “units” field on the claim form.
- The patient must be under the care of a physician or non-physician practitioner during the time of observation care, and this care must be documented in the medical record with an order for observation, admission notes, progress notes and discharge instructions (notes) — all of which are timed, written and signed by the physician.
- For Medicare members, a signed Medicare Outpatient Observation Notice (MOON) should be documented in the medical record.

NOT COVERED:

- Outpatient observation care should not be used for routine diagnostic services and outpatient surgery/procedures.
- Outpatient observation care that is provided only for the convenience of the patient or his/her family or physician is not reimbursable.

POLICY GUIDELINES

As allowed by contract, we reserve the right to audit and make adjustments to payments if the outcome of those audits identifies incorrect billing resulting in overpayment or underpayment. Observation care, regardless of the manner billed or reported, will be subjected to these audits and payment adjustments.

In the majority of cases, the decision whether to discharge a patient from the hospital following resolution of the reason for the observation care or to admit the patient as an inpatient can be made in less than 48 hours, usually in less than 24 hours. In only rare and exceptional cases does reasonable and necessary outpatient observation care span more than 48 hours.

Hospitals may bill for patients who are directly referred to the hospital for outpatient observation care. A direct referral occurs when a physician in the community refers a patient to the hospital for outpatient observation care, bypassing the clinic or emergency department (ED) visit.

If the physician or healthcare professional is uncertain if an inpatient admission is appropriate, the physician or healthcare professional should consider admitting the patient for observation care.

For coverage to be appropriate under Medicare for an inpatient admission, the patient must demonstrate signs and/or symptoms severe enough to warrant the need for medical care and must receive services of such intensity that they can be furnished safely and effectively only on an inpatient basis.

Reporting Requirements

- All units/hours less than eight hours will pay the primary service only and will not qualify for observation care.
- When a patient is admitted to the inpatient setting directly from the emergency room (ER) and/or observation care services (OBS), services in the ER and OBS will be included in the authorized inpatient rate with no separate payment

CODING

N/A

BENEFIT APPLICATION

Medicare members incur outpatient hospital cost sharing liability for observation care.

DESCRIPTION OF SERVICES

Observation care is a well-defined set of specific, clinically appropriate services that include ongoing short-term treatment, assessment and reassessment before a decision can be made regarding whether patients will require further treatment as inpatients or if they are able to be discharged from the hospital. Observation care is commonly ordered for patients present in the emergency department and who then require a significant period of treatment or monitoring in order for a decision to be made concerning their admission or discharge.

DEFINITIONS

Outpatient observation care: This care is composed of a well-defined set of specific, clinically appropriate services that include ongoing short-term treatment, assessment and reassessment before a decision can be made regarding whether patients will require further treatment as inpatients or if they are able to be discharged from the hospital. Outpatient observation care is commonly ordered for patients present in the emergency department and who then require a significant period of treatment or monitoring in order for a decision to be made concerning their admission or discharge.

Medicare Outpatient Observation Notice (MOON): The MOON is a standardized notice to inform Medicare beneficiaries (including health plan enrollees) that they are outpatients receiving observation services and are not inpatients of a hospital or critical access hospital (CAH). The MOON is mandated by the Federal Notice of Observation Treatment and Implication for Care Eligibility (NOTICE) Act, which was passed on August 6, 2015. The NOTICE Act requires all hospitals and CAHs to provide written and oral notification under specified guidelines.

Emergency Room (ER) Care: Care given for a medical emergency when it is believed that a patient's health is in serious danger.
