- CHIP
 - Childhood immunization status – combo #10
 - Well-child visits, third, fourth, fifth and sixth years of life
- Medicare
 - Colorectal cancer screening: DSNP and Medicare
 - Controlling high blood pressure: DSNP and Medicare
 - Diabetic measure:
 - HbA1c control
 - Transition of care:
 - Notification of an inpatient admission: DSNP and Medicare
 - Receipt of discharge information: DSNP and Medicare

We believe that Health Partners Plans can attribute the increase in the HEDIS rates through several methods, such as improvements in provider and member education. Our Healthier You, Baby Partners, Health Kids and Special Needs Units work hard to engage members and build relationships of respect and dignity in order to improve health care outcomes. Our Network Account Managers, Clinical Risk Assessment team and Quality Management nurses work with providers' offices to educate providers and their staff regarding new programs and incentives, as well as other available resources. The Community Based Case Management (CBCM) has begun to work with provider sites in order to assist the members to improve their clinical outcomes.
